CMC for the field of measured quantity: Length

Ord. nr. ¹	Calibrated quantity / Subject of calibration	Nominal range		Parameter(s) of the measurand	Lowest stated expanded measurement uncertainty ²	Calibration principle	Calibration procedure identification ³	Loca- tion
		min	unit					
1	Parallel gauge blocks	0.5 mm	to	100 mm	(1 L + 0.1) µm	Mechanical comparison with a standard using a comparator	MKGD KM.2	
2	Slide gauges	0 mm	to	500 mm	(8 L + 10) µm	Comparison with parallel gauge blocks and rings	MKGD PM.2	
3	Micrometers	0 mm	to	100 mm	(1 L + 2.5) µm	Comparison with parallel gauge blocks	MKGD MM.2	
4	Deviation meters	0 mm	to	30 mm	division 0.01 mm	Direct measurement on a calibration instrument for indicators	MKGD UM.2	
		0 mm	to	30 mm	division 0.001 mm	(1 L + 1) µm		
5	Cylindrical gauges	0.5 mm	to	50 mm	(1 L + 2.5) µm	Direct measurement by a passameter	MKGD VK.1	
6	Feeler gauges	0.02 mm	to	2 mm	(1 L + 2.5) µm	Direct measurement by a micrometer	MKGD LS.1	
7	Steel tape measures	0 mm	to	3,000 mm	(20 L + 100) µm	Comparison with a steel rule	MKGD SM.1	
		3,000 mm	to	5,000 mm	(50 L + 200) µm			
	Steel rules	0 mm	to	1,000 mm	(20 L + 100) µm			
8	Tape measures	0 mm	to	5,000 mm	0.4 mm	Comparison with a tape measure	MKGD SM.1	
		5,000 mm	to	20,000 mm	0.6 mm			
		20,000 mm	to	30,000 mm	0.8 mm			

¹ Asterisk at the ordinal number identifies the calibrations, which the Laboratory is qualified to carry out outside the permanent laboratory premises.

² The expanded measurement uncertainty is in accordance with ILAC-P14 and EA-4/02 M a part of CMC and it is the lowest value of the respective uncertainty. If not stated otherwise, its coverage probability is approx. 95 %. If not stated otherwise, the uncertainty values stated without a unit are relative to the measured value. The uncertainty value stated herein is based on the best conditions achievable by the laboratory; the uncertainty value of a specific calibration may be higher depending on the conditions of such a calibration. For identical extreme values of adjacent ranges, the lower uncertainty value always applies.

³ If the document identifying the calibration procedure is dated only these specific procedures are used. If the document identifying the calibration procedure is not dated, the latest edition of the specified procedure is used (including any changes).

L = length in metres

¹ Asterisk at the ordinal number identifies the calibrations, which the Laboratory is qualified to carry out outside the permanent laboratory premises.

² The expanded measurement uncertainty is in accordance with ILAC-P14 and EA-4/02 M a part of CMC and it is the lowest value of the respective uncertainty. If not stated otherwise, its coverage probability is approx. 95 %. If not stated otherwise, the uncertainty values stated without a unit are relative to the measured value. The uncertainty value stated herein is based on the best conditions achievable by the laboratory; the uncertainty value of a specific calibration may be higher depending on the conditions of such a calibration. For identical extreme values of adjacent ranges, the lower uncertainty value always applies.

³ If the document identifying the calibration procedure is dated only these specific procedures are used. If the document identifying the calibration procedure is not dated, the latest edition of the specified procedure is used (including any changes).

Explanatory notes:

R.....Resistance in MΩ

C.....Capacity in µF

L Inductance in H

3	Pulse signal period / Time interval meters, counters, oscilloscopes, function generators, pulse generators, digital and mechanical stopwatches, timers, inspection instruments	2.85 ns 10 ms	to	10 ms 1,000 s		$U_{\text{inp}} \geq 1 \text{ V}$	τ over 10 s τ over 1 s	$8.0 \cdot 10^{-11}$ $8.0 \cdot 10^{-11}$	Direct measurement by a counter	MKF-t1
4	Pulse signal duration / Time interval meters, counters, oscilloscopes, function generators, pulse generators, digital and mechanical stopwatches, timers, inspection instruments	5 ns 10 s	to	10 s 10^5 s		$U_{\text{inp}} \geq 1 \text{ V}$		1.0 ns $8.0 \cdot 10^{-11}$	Direct measurement by a counter	MKF-t1, MKE-SRP.1
		10^5 s	to	$4 \cdot 10^5$ s				$3.6 \cdot 10^{-8}$	Direct comparison with a calibrator	MKF-t1

¹ Asterisk at the ordinal number identifies the calibrations, which the Laboratory is qualified to carry out outside the permanent laboratory premises.

² The expanded measurement uncertainty is in accordance with ILAC-P14 and EA-4/02 M a part of CMC and it is the lowest value of the respective uncertainty. If not stated otherwise, its coverage probability is approx. 95 %. If not stated otherwise, the uncertainty values stated without a unit are relative to the measured value. The uncertainty value stated herein is based on the best conditions achievable by the laboratory; the uncertainty value of a specific calibration may be higher depending on the conditions of such a calibration. For identical extreme values of adjacent ranges, the lower uncertainty value always applies.

³ If the document identifying the calibration procedure is dated only these specific procedures are used. If the document identifying the calibration procedure is not dated, the latest edition of the specified procedure is used (including any changes).
